

HEADLINE

GUARDA CONTINUES TO RECEIVE POSITIVE MEDIA COVERAGE ACROSS THE COUNTRY

Key Highlights

- Guarda Systems is invited to discuss the benefits of its technology in radio podcast
- Business News WA features Guarda as a lead story in the New Year edition of its publication
- News.com.au profiles the story of our Founder and Head of R&D – Steve Terpstra

Radio Podcast – New Technology to Combat Silicosis

Our Managing Director (Craig Penty), was extremely pleased to be invited to participate in a podcast with Perth radio station 6PR. The podcast discussed the issue of silicosis in the workplace and how the Guarda technology represents and innovative solution to the problem.

“It was a real milestone for our business to be given the opportunity for a live discussion about the issue of silicosis and explain in person how our technology can provide a solution. We’re looking forward to this being the first of many to come,” said Craig following the podcast.

Business News WA Article – Saw Cuts into Silica Emissions

For the second time in a few years, Guarda features in a prominent article in the Business New WA publication. The article profiled both Craig Penty (MD) and Steve

‘It’s great to have our technology being given the exposure its deserves in these various media publications” said Steve. “Now that we have the product manufactured it’s a much easier story to sell as we can now demonstrate how it works and show the benefits it offers.”

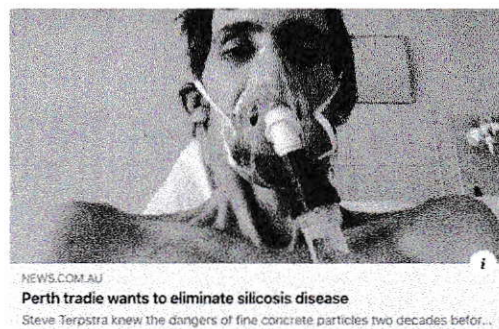

News.com.au Article – Perth Tradie Wants to Eliminate Silicosis

The story of Steve Terpstra, and his vision to combat silicosis in the workplace, was profiled in an excellent article this month on news.com.au.

The article shared Steve’s 20-year history of trying to educate and influence the industry to find a solution to the problem and how this led to his invention of a world first technology and the Guarda Edge Powercutter saw.

“What Steve is frustrated with is he knew about this 20 years ago and knew the technology wasn’t enough to keep people safe.”

Company Overview

Guarda Systems is a Perth based company that designs, develops and manufactures equipment for masonry cutting in the construction industry. They have invented a range of equipment that uses patented, revolutionary technology to protect the health of workers. This technology (Tri-Vac™) reduces the level of silica dust and slurry material that workers are exposed to well below industry limits and removes Carbon Monoxide (CO) completely from the work area. Global manufacturers have not been able to replicate this.

A handwritten signature in black ink, appearing to read "Craig Penny".
