OCULAR ROBOTICS LIMITED (ASSOB: OCR)

- **Share Offer Closing 17th July 2016**

Ocular Robotics' current share offer on the ASSOB board closes on the 17th July 2016 and I would like to take this opportunity to thank investors in this share offer and our shareholders generally for the support they have shown for the company.

Ocular Robotics has achieved a great deal during this share offer with growing engagement in the USA, Japan, South Korea, Europe, Singapore, China, India, Turkey and here in Australia.

Growth of the company's distributor network continues to be a focus, while direct engagement with customers in the robotics, automation, defence and security sectors begins to pay dividends.

As commercialisation of the RobotEye technology platform continues the range of products leveraging the core capability of unmatched simultaneous speed and precision grows. OCR now offers 3D scanning, vision, thermal and hyperspectral products all of which have either our 25mm or 60mm aperture RobotEye systems at their core.

Ocular Robotics has won a number of awards over the years and a particular highlight in this area in the last twelve months has been winning the 'Next Gen Game Changer' Award at the RoboBusiness conference held in San Jose.

We look forward to accelerated growth as the foundations that have been laid down deliver revenues from the key target sectors but also from a range of applications not originally considered which continue to be identified by our customers, ranging from the digitisation of infrastructure assets and thermal stress analysis to fall detection and even the identification of intruder species in free range poultry farming.

Mark Bishop - Director, CEO
