

OPMANTEK

OPMANTEK WINS iAWARD FOR 2ND YEAR

Wednesday, 16 June 2014

Opmantek (ASSOB:OMK) has again been recognised as a leading innovator in their field of Network Management Software by taking out a Qld iAward for the second consecutive year (2013 and 2014).

The iAwards are an internationally associated awards program focused on recognizing the achievements of innovators. CEO Danny Maher says that he is “very proud to receive the award for a second consecutive year in recognition for Opmantek’s continued success”.

Opmantek took out this year’s iAward in recognition of the success of their leading network management software “Network Management Information System” (NMIS).

Since providing commercial backing for NMIS through the support of an ASSOB raise, the uptake in use of NMIS globally has been extraordinary.

10,000 organisations have implemented Opmantek products in the last 12 months including some of the world’s largest

Telecommunications organisations and banks. A new organisation implements NMIS every 8 minutes, making Opmantek the leading supplier of Network Management software globally. “Opmantek has entered into a new phase of high growth and it is a very exciting time”, said Mr Maher.

Opmantek shares can be purchased on the ASSOB Secondary offerings board.
