GUARDA GROUP REACHES CAPITAL RAISING MILESTONE OF \$500K

Highlights

- Guarda Group Holdings has successfully raised \$500,000 of its target \$1M in funding
- Achieving this half-way milestone will assist with the global launch of two new products planned for May-June 2019
- The balance of funds is now being raised at \$0.05 per share and expected to be completed by the end of 2019.

Guarda Group Holdings has successfully raised \$500k in funds from new and existing investors across Australia and China. This capital will support the manufacture and international distribution of two new products. These innovative new products will add to the 2 existing products in the portfolio, The Guarda Fume Tube & Guarda FTR095 Powercutter.

Guarda Vacuum Generator: A one of a kind product that replaces a petrol generator, vacuum and water pump all in one lightweight, convenient unit. Can be used for fume, dust and slurry extraction and ideal for use in locations with no electrical power or pressurized water supply.

Guarda Edge Powercutter: Revolutionary concrete saw that removes all CO fumes and virtually all silica dust & slurry during cutting. World-beating silica dust control helps to protect workers from deadly silicosis which kills and debilitates thousands of people annually.
