

6 December 2018

Guarda is excited to be launching the new Edge Powercutter at the upcoming World of Concrete Trade Show in Las Vegas, January 2019. This is the largest trade show of its type anywhere in the world. We have also entered the Edge Powercutter in the "Most Innovative Product" competition. We won this prestigious competition once before in 2015 with our Fume Tube product.

The Edge Powercutter solves the silica dust issue which is prevalent in concrete cutting. Silica Dust causes Silicosis and Lung Cancer and recently has featured heavily in the media in Australia where more than 50 trades-people have been diagnosed with Silicosis. Silicosis is a progressive lung disease and is irreversible and often fatal.

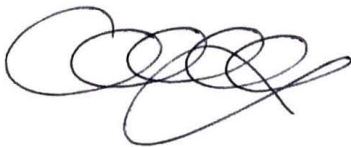

The Edge Powercutter has world-beating silica dust control because we use a more efficient approach to control the silica dust at the source. It is also the only concrete saw that removes slurry and Carbon Monoxide fumes during cutting.

When we attend the show, we will have discussions with some of the global OEM's who have expressed interest in the technology, including Husqvarna and Stihl.

Please see attached Point of Sale material for the show along with a short video of the prototype in action (the professional video will be available and circulated soon).
