

## TUTIS VReddo: Alliance Agreement with Orcoda Limited

**TUTIS VReddo** and **Orcoda Limited** have entered into an Alliance Agreement to integrate and cross-sell their products as a unified solution to their respective customers.

OWLS is Orcoda's patented booking system for personnel supply chains that is based on Service-Oriented Architecture (SOA) that is in turn integrated into clients' existing personnel systems via APIs. OWLS manages the "white space" between existing personnel supply chains and linking multiple databases on one central operating platform, with the ability to track the movement and compliance of each worker through the onboarding, mobilisation and worksite management cycle. OWLS has been used

in large scale infrastructure and natural resources projects in Australia. In addition to OWLS, Orcoda also owns and operates the Orcoda Logistics Management Platform (**OLMS**) that is used in the healthcare and transport logistics segments.

**Chris Wright, CEO of TUTIS VReddo, said:** “We are excited about our alliance with Orcoda. We believe there are significant cross-selling opportunities between TUTIS VReddo and Orcoda and are looking forward to working closely with the Orcoda team.”

TUTIS VReddo, founded in 2016, is an Australia-based workforce training and compliance management software company for asset intensive and highly regulated industries, such as mining, processing and registered training organisations. The TUTIS VReddo platform provides a range of training delivery formats including virtual reality enabled modules with a solution spanning from project resourcing and skills management, through mobilization and induction, to training and assessment management and onto certification, authorization, site access and site compliance.

**Geoff Jamieson, Orcoda Managing Director, said:** “TUTIS VReddo is a tremendous fit with our Orcoda Workforce Logistics Platform (**OWLS**), offering our clients an integrated personnel onboarding and compliance front-end solution. With TUTIS VReddo’s API into OWLS, our clients will have full visibility and real time update of their workers’ onboarding, VR training and compliance status to help them to efficiently manage their subsequent mobilisation and deployment of their workforce.”

If you would like to learn more, specifically the benefits that can now be enjoyed through this alliance, please don’t hesitate to [contact us](#).
